THE THREAT OF LAW: REGULATORY BLACKMAIL OR AN ANSWER TO CONGRESSIONAL GRIDLOCK?

The administrative state has become an increasingly dominant force in American jurisprudence, at times wielding its power even beyond the reach of judicial and legislative control. Notwithstanding the fact that many legal scholars, regulated entities, and politicians have lamented the expanding role of the administrative state, regulatory agencies are more frequently flexing their newly acquired muscle and acting in contravention to traditional notions of checks and balances and delegatory norms.

In this Article, I examine a burgeoning administrative law phenomenon I term the “threat of law”, whereby an administrative agency unilaterally imposes its regulatory will on regulated entities outside of the traditional boundaries of its rulemaking authority. The regulatory body can exercise this threat of law by issuing regulations grounded in dubious statutory authority and daring regulated entities to challenge them in court. In the absence of congressional action, regulated entities can be left with the options to comply with the disputable regulation, defy the regulation and face penalties and litigation, or fight an often protracted and expensive court battle to get the regulation overturned. The threat of law also ups the ante for an increasingly impotent Congress. By changing the status quo, the threat of law can push Congress to either act to change the questionable regulation or acquiesce.

In order to illustrate the tangible pressure this threat of law can inflict on affected regulatees, this Article will focus on recent actions taken by the Treasury Department in response to the growing tide of corporate tax inversions, whereby entities historically domiciled in the United States move their tax headquarters to lower-tax jurisdictions. Even though the President and many members of Congress lament the rise of inversion transactions, Congress has thus far been unable to pass any new legislation. However, even after the Treasury Secretary
publicly affirmed in July 2014 that Treasury lacked the regulatory power to act without congressional intervention, Treasury quickly changed course and two months later issued a wide-ranging notice aggressively targeting the benefits of corporate tax inversions and issued additional follow-on regulations in November 2015. Any future regulations issued pursuant to these notices are to be retroactive to the date of the respective notices.

Ultimately the real world effect of Treasury’s actions may not depend on whether or not Treasury in fact has the regulatory authority to unilaterally act to stop inversion transactions. Indeed, many believe it does not. Nevertheless, Treasury’s actions produce a threat of law that can, at least temporarily, have the same chilling effect on transactions as a legitimately exercised force of law. This is particularly true with respect to Treasury, because it enjoys statutory privileges that make it difficult for taxpayers to challenge even an illegitimately exercised threat of law ex ante.

This Article will examine these attempts by Treasury to circumvent congressional intervention, even when it is unclear whether it possesses the regulatory authority to do so. It will explore the efficacy this threat of law can have on Treasury’s ability to act swiftly in response to emerging tax challenges, particularly in the face of congressional gridlock. Moreover, this Article will address the implications an effective threat of law has on an agency’s statutory retroactivity powers, traditional notions underlying Congress’s perceived delegation of authority, and to the level of justiciability protections that these actions should be afforded.
I. Introduction

The administrative state has become an increasingly dominant force in American jurisprudence, at times wielding its power even beyond the reach of judicial and legislative control.¹ Notwithstanding the fact that many legal scholars, regulated entities, and politicians have lamented the expanding role of the administrative state, regulatory agencies are more frequently flexing their newly acquired muscle and acting in contravention to traditional notions of checks and balances and delegatory norms.²

In this Article, I will examine a burgeoning administrative law phenomenon I term the “threat of law,” whereby an administrative agency unilaterally imposes its regulatory will on regulated entities on the boundaries of, or even outside of, the traditional rulemaking process. The regulatory body can exercise this threat of law by issuing regulations grounded in dubious statutory authority and daring regulated entities to challenge them in court. Regulated entities can be left with the non-ideal options to comply with the disputable regulation, face penalties and litigation, or fight a protracted and expensive court battle to get the regulation overturned.

Although I believe that an active “threat of law” can have implications in the regulatory world beyond the field of tax law, in order to illustrate the tangible pressure this threat of law can on inflict on affected regulatees, this Article will focus on recent actions taken by the U.S. Department of the Treasury (“Treasury”) in response to the growing tide of corporate tax inversion transactions. During the last four years the U.S. tax

system has experienced a flurry of corporate inversion transactions, whereby U.S. based multinational corporations “invert” by replacing their former U.S. parent with a foreign corporation, typically located in a low-tax jurisdiction, while making otherwise minimal changes to their actual day-to-day operations. The overall impact of an inversion transaction is that it makes it easier for U.S. corporations to limit or avoid U.S. taxation on their worldwide earnings, while keeping the bulk of their operations in the United States.

By early 2014, the White House and certain members of Congress were making increasingly forceful statements against these transactions, which were believed to create a significant and immediate threat to the U.S. fisc. President Obama made several speeches condemning corporate inversion transactions as violating “economic patriotism”, and began to put pressure on Congress and Treasury to take action.

---

4 The United States is one of only a handful of countries that make domestic corporations pay tax at the domestic corporate tax rate, even on income earned from foreign subsidiaries located in low-tax jurisdictions. Even Canada and the United Kingdom only tax domestic profits. A successfully tax inverted corporation significantly reduces the amount of corporate tax revenues received by the U.S. fisc. Previously Congress passed I.R.C. section 7874 in the American Jobs Act of 2004, which was meant to prevent corporate tax inversions. However, in recent years, taxpayers have developed inversion transaction structures that effectively exploit loopholes in I.R.C. section 7874.

5 See, e.g., Oliver Duggan, Barack Obama attacks 'corporate deserters' in tax inversion takeovers, THE TELEGRAPH (July 25, 2014). President Obama acknowledged that these companies are “basically taking advantage of tax provisions that are technically legal,” but argued that “If you're doing business here, if you're basically still an American [company], but you're simply changing your mailing address to avoid paying taxes, then you're really not doing right by the country and by the American people.” CNBC Interview with
On July 15, 2014, Treasury Secretary Jacob Lew sent a letter to Congress, imploring them to pass legislation to curb “this abuse of our tax system” and to make any legislation retroactive to May 2014. Congress, however, was deadlocked and it was clear that it would be unable to pass any legislation in the foreseeable future. This stalemate in Congress left Treasury to attempt to curb the growing tide of inversion transactions. However, at a press conference on July 16, 2014, Secretary Lew publicly declared, “we [at Treasury] do not believe we have the authority to address this inversion question through administrative action” without help from Congress. In fact, many practitioners, taxpayers and academics likewise questioned whether Treasury could unilaterally act to stop corporate

---

6 Letter from Jacob Lew, Sec’y of the Treasury, to Dave Camp, Chairman of the Ways and Means Comm., U.S. House of Representatives (July 16, 2014), available at http://im.ft-static.com/content/images/89217f94-0ca4-11e4-943b-00144f8ebd0.pdf. It is important to note that many taxpayers do not view inversions as abusive tax transactions. Rather, they are viewed as legitimate methods of achieving tax reductions on their worldwide operations. See, e.g., Diana Furchtgott-Roth, Tax inversions help, not hurt, the economy, MARKET WATCH (Aug. 8, 2014), available at http://www.marketwatch.com/story/tax-inversions-help-not-hurt-the-economy-2014-08-08.

7 Stephen E. Shay, Mr. Secretary, Take the Tax Juice Out of Corporate Expatriations, TAX NOTES, at 473 (July 28, 2014) (“[I]n the current political environment there is little reason to believe that a statutory solution will be enacted”). A’Dair Flynt, Notice 2014-52: The Treasury’s Response to Corporate Tax Inversions, LOUISIANA LAW REVIEW (Nov. 19, 2014), (“Both ends of Pennsylvania Avenue reacted to the surge of inversions. Although legislative action is likely impossible this year and uncertain next year, several Members of Congress have circulated concepts to stop tax inversions and protect the flow of revenue to the U.S. Treasury.”), available at http://lawreview.law.lsu.edu/2014/11/19/notice-2014-52-the-treasurys-response-to-corporate-tax-inversions/#_ftn73.

inversion transactions under the existing statutory and regulatory framework.\textsuperscript{9}

However, on July 29, 2014, former Treasury Deputy Assistant Secretary and Harvard Law School Professor Stephen Shay wrote an open letter to Secretary Lew in Tax Notes, a leading source of tax news for tax professionals, arguing that under his interpretation of the existing regulations, Treasury in fact could and should unilaterally issue regulations to stop inversion transactions.\textsuperscript{10} While it is unclear whether this letter by itself, or in combination with other factors finally pushed Secretary Lew to act, just two months after his own declaration that he was powerless to do so, Secretary Lew issued Notice 2014-52 (the “Inversion Notice”)\textsuperscript{11}, outlining Treasury’s intention to issue a broad set of anti-inversion regulations that would put an end to (or at least a damper on) corporate inversions.

Treasury’s abrupt turnabout in position and issuance of the Inversion Notice outlining broad retroactive regulatory action sent discernable shockwaves through the corporate and broader tax community. Academics and practitioners debated and questioned whether Treasury acted outside of the bounds of its statutory authority.\textsuperscript{12} In fact, Kimberly Blanchard, a leading tax

\textsuperscript{10} Stephen E. Shay, Mr. Secretary, Take the Tax Juice Out of Corporate Expatriations, TAX NOTES, at 473 (July 28, 2014) (“[W]hen a material portion of the U.S. corporate tax base is at risk, doing nothing borders on the irresponsible.”).

\textsuperscript{12} Thomas Lys, who teaches corporate restructuring at Northwestern University’s Kellogg School of Management, stated that “[i]t’s a stretch of current regulations,” for the Executive Branch to act unilaterally. Josh
practitioner, explicitly declared “if challenged in court, most of the rules in the [Inversion] Notice would not stand.”

Taxpayers directly affected by the Inversion Notice were left scratching their heads. Some were in the middle of inversion transactions that were not yet closed. Others were in serious discussions to consider inverting offshore. In fact, in October 2014, AbbVie,

Lederman, *Obama Seeks Executive Ways To Limit Tax Inversions*, ASSOCIATED PRESS (Aug. 5, 2015), available at http://www.huffingtonpost.com/2014/08/05/obama-tax-inversions_n_5652336.html. *But see* Stephen E. Shay, *Mr. Secretary, Take the Tax Juice Out of Corporate Expatriations*, TAX NOTES, at 473 (July 28, 2014) (“One of the Treasury secretary’s most important responsibilities is the health of the tax system under the laws adopted by Congress. Congress has given Treasury broad and in some cases sweeping authority to adopt regulations, including specific grants of authority that bear on issues at the heart of corporate inversions.”).

Walgreen Co. was contemplating relocating to Switzerland. Paul Ziobro, *Walgreen Weighs Riding Tax-Inversion Wave*, THE WALL STREET JOURNAL.
Inc. called off the largest proposed U.S. company inversion with U.K.-based Shire Plc., a $54.8 billion transaction that was supposed to lower AbbVie’s tax liability from 22 percent to 13 percent. AbbVie agreed to pay a $1.635 billion break-up fee to its rival Shire Plc. rather than move forward with the deal, and directly cited the Inversion Notice as the reason its board of directors withdrew support for the transaction. AbbVie’s chariman and CEO, Richard A. Gonzalez, declared “[t]he unprecedented unilateral action by the U.S. Department of Treasury may have destroyed the value in this transaction...” Salix Pharmaceutical also cancelled its proposed inversion transaction, claiming the Inversion Notice created “more uncertainty regarding the potential benefits we expected to achieve.”

17 Simeon Bennett & Caroline Chen, AbbVie Becomes Biggest U.S. Company To Move Domestic Address in $55 Billion Deal, DAILY TAX REP. (BNA) No. 139, at G-2 (July 18, 2014).

18 Josh Beckerman, AbbVie, Shire Terminate Year’s Biggest Deal; AbbVie Cites New U.S. Tax Rules Aimed at Deterring So-Called Inversion Deals, WALL STREET JOURNAL (Oct. 20, 2014), available at http://www.wsj.com/articles/abbvie-shire-terminate-what-was-years-biggest-deal-1413841225 (AbbVie stated the Inversion Notice “reinterpreted long-standing tax principles in a uniquely selective manner designed specifically to destroy the financial benefits of these types of transactions.”).

What if anything can these affected companies do to challenge this sweeping action by Treasury if indeed Treasury did overstep its regulatory authority? Unfortunately for them, the answer is very little other than to proceed at their own risk. This is true even in light of the Supreme Court’s recent pronouncement in *Mayo Foundation v. United States*\(^\text{21}\) that tax and the Treasury are not “special.” This declaration by the Supreme Court purportedly ended the prior reign of so-called “tax exceptionalism,” suggesting that tax regulations should be treated the same as regulations issued by any other administrative body.\(^\text{22}\) However, even in the shadow of *Mayo*, because of Treasury’s explicit statutory grant to issue retroactive regulations, the broad protections against pre-enforcement judicial review afforded to it by statute, and the judicial deference it is afforded, successfully challenging Treasury’s abuse of power remains an uphill, long, and expensive battle for taxpayers.

In light of the obstacles affected taxpayers are up against in the face of regulations of dubious authority, Treasury is able to wield what I call an effective “threat of law.” While certainly less binding than an actual legitimately exercised “force of law,” the effects (at least in the near-term) can be identical. For example, with respect to the Inversion Notice, taxpayers can either comply with Treasury’s Inversion Notice or potentially face a myriad of negative consequences. When faced with these options, while some taxpayers have rolled the proverbial dice and found ways to structure around the Inversion Notice,\(^\text{23}\) others have declined to

---

the notice, Medtronic, which had originally intended to finance the transaction using its $13.5 billion cash reserves from earnings abroad, was forced to borrow $16 billion.”), available at http://www.thestreet.com/story/13024863/2/medtronic-avoids-us-taxes-while-saddling-shareholders-with-a-hefty-tax-bill.html.

\(^\text{23}\) The Medtronic deal still closed, albeit with revised terms. *See discussion supra* note 20.
II. The Inversion Notice Saga

As mentioned above, a U.S.-based multinational corporation engages in a so-called “inversion” transaction by replacing its former U.S. parent with a foreign corporation, typically located in a low-tax jurisdiction, while making otherwise minimal changes to its actual day-to-day operations.\(^{26}\) While

\(^{24}\) AbbVie, Inc. canceled its planned inversion at a cost of over $1 billion. See discussion supra notes 17-19 and accompanying text.

\(^{26}\) Typically this structure allows corporations to significantly reduce their overall effective tax rate. The United States still has the highest statutory corporate tax rate of the OECD countries at 35 percent, and the third highest
many of the inverted companies continue to have a substantial continuing U.S. presence, the inverted structure makes it easier for the U.S. corporations to limit or avoid U.S. taxation on their worldwide earnings.27

Back in 2004 Treasury responded to an initial wave of inversions in the early 2000s by passing I.R.C. section 7874,28 which specifically targets and penalizes these transactions. In particular, I.R.C. section 7874 disregards the inversion and continues to treat the new foreign parent as a U.S. corporation for tax purposes if a U.S.-based entity restructures such that the former U.S. parent is replaced by a foreign parent and (1) less than 25 percent of the new foreign entity’s business activity is in the home country of the new foreign parent, and (2) the shareholders of the old U.S. parent end up owning at least 80 percent of the shares of the new foreign parent.29 Inverted corporations that have a greater than 60 percent, but less than 80 percent, continuing ownership stake by the shareholders from the former U.S. parent are not treated as U.S. corporations, but are subject to other potentially adverse tax consequences.30 These

27 The United States is one of only a handful of countries that make domestic corporations pay tax at the domestic corporate tax rate, even on income earned from foreign subsidiaries located in low-tax jurisdictions. Even Canada and the United Kingdom only tax domestic profits. A successfully tax inverted corporation significantly reduces the amount of corporate tax revenues received by the U.S. fisc. Previously Congress passed I.R.C. section 7874 in the American Jobs Act of 2004, which was meant to prevent corporate tax inversions. However, in recent years, taxpayers have developed inversion transaction structures that effectively exploit loopholes in I.R.C. section 7874.

28 All section references herein are to the Internal Revenue Code of 1986, as amended, and the Treasury regulations issued thereunder.

29 I.R.C. section 7874(b) and Treasury Regulation § 1.7874-3.

30 In particular, these entities will be taxed on any gain from their post-inversion transfer of assets. I.R.C. sections 7874(a)(1) and (d)(2).
consequences, however, are more avoidable and multinational corporations have readily exploited these loopholes.

Thus, although the existing I.R.C. section 7874 provisions effectively shut down inversions involving ownership levels of at least 80 percent, they have been ineffective in stopping inversions at lower ownership thresholds, and the current wave of inversions involves transactions with a continuing ownership interest under 80 percent. As Treasury has acknowledged: “Current law subjects inversions that appear to be based primarily on tax considerations to certain potentially adverse tax consequences, but it has become clear by the growing pace of these transactions that for many corporations, these consequences are acceptable in light of the potential benefits.” It is estimated that over twenty U.S.-based companies have inverted since 2012.

Treasury and Congress were under significant pressure from President Obama, the media, and prominent tax scholars to take immediate and decisive action to stop the surge of inversion activity. However, notwithstanding even a direct plea to Congress by Secretary Lew to pass legislation to end inversion transactions, Congress declined to do so. This is true even though

---

both sides of the aisle publicly supported taking actions to curb these transactions.\textsuperscript{35}

As discussed above, in the absence of congressional action, Treasury’s response to the new flurry of inversion activity was to issue the Inversion Notice. Although Treasury itself acknowledged that the Inversion Notice was not a complete solution, it issued the notice in hopes that it would at least slow down the flow of inversion transactions. The Inversion Notice involved five different I.R.C. sections - 304(b)(5)(B), 367, 956(e), 770(l), and 7874, and was intended to attack two different aspects of inversion transactions.

First, the Inversion Notice outlined rules designed to attack pre-inversion tactical moves by treating more purported inverted companies as U.S. corporations.\textsuperscript{36} For instance, I.R.C. section 7874 clearly establishes an ownership percentage of 80 percent (i.e., at least 80 percent of the new foreign corporation is held by the former U.S. corporation shareholders) in order to treat the foreign acquirer as a U.S. corporation. Although Treasury clearly lacked the power to rewrite the specific 80 percent threshold written by Congress, it opted to instead exercise its purported regulatory powers to change what goes into the ownership fraction. By proposing rules to maximize what is included in the numerator and minimize what is included in denominator, the rules outlined in the Inversion Notice can have the practical effect of decreasing the existing ownership percentage required by the existing statute.\textsuperscript{37} Second, the

\textsuperscript{35} Notwithstanding their agreement in principle, a large disparity in approach exists in how to deal with the inversion problem.

\textsuperscript{37} Kimberly S. Blanchard, Extensive New Anti-Inversion Rules Issued, TAX NOTES, at 89 (Oct. 6, 2014) (“[The IRS] continued its pattern of stretching its regulatory authority to the limit — some would say beyond the limit — to reach as many transactions as possible by adopting rules to minimize the denominator and maximize the numerator of the ownership fraction, goosing the fraction upward.”).
Inversion Notice takes aim at post-inversion transactions intended to allow the newly inverted corporations to access foreign earnings without incurring additional U.S. taxes.\(^{38}\) Importantly, the Inversion Notice announced that once actual regulations are issued they would be retroactive to the date of the Inversion Notice, September 22, 2104.\(^{39}\)

The IRS issued a second inversion notice on November 19, 2015, announcing its intention to issue additional regulations targeting inversion transactions (the “Second Inversion Notice,” and together with the “Inversion Notice,” the “Inversion Notices”). In addition to making corrections and clarifications to some of the rules put forth in the Inversion Notice, the Second Inversion Notice announces additional guidance aimed at both limiting inversion transactions themselves\(^ {40}\) and limiting post-inversion benefits.\(^ {41}\)

\(^{40}\) Specifically, the will target abusive inversion transactions by “(i) requiring the foreign acquiring corporation to be subject to tax as a resident of the relevant foreign country in order to have substantial business activities in the relevant foreign country; (ii) disregarding certain stock of the foreign acquiring corporation in “third-country” transactions; and (iii) clarifying the definition of nonqualified property for purposes of disregarding certain stock of the foreign acquiring corporation.” 2015-49 I.R.B. 775 at 1.

\(^{41}\) Treasury intends to address post-inversion transactions by “(i) defining inversion gain for purposes of section 7874 to include certain income or gain recognized by an expatriated entity from an indirect transfer or license of property and providing for aggregate treatment of certain transfers or licenses of property by foreign partnerships for purposes of determining inversion gain; and (ii) requiring an exchanging shareholder to recognize all of the gain realized upon an exchange of stock of a controlled foreign corporation...” 2015-49 I.R.B. 775 at 2.
There was speculation that Treasury would attempt to target one of the primary post-inversion benefits of inversion transactions—earnings stripping—in the Second Inversion Notice. Earnings stripping is an important post-inversion technique because even after an inversion, a U.S. corporation’s U.S.-based businesses are still taxed by the United States at U.S. tax rates. In an attempt to lower the taxes still owed to the United States, the existing U.S. business units of the inverted corporation borrow large amounts of money from their now-foreign parent. Under existing U.S. tax laws, the U.S. subsidiaries take deductions for the interest paid to the foreign parents, thereby reducing their U.S. tax liability. Notably, the Second Inversion Notice failed to address this key benefit of inversion transactions, although it did explicitly proclaim its intention to do so in the future.

Notwithstanding the absence of earnings stripping provisions, collectively the Inversion Notices pose a substantial, although not insurmountable, roadblock for companies still

---

42 Treasury and academic scholars have both conducted studies analyzing the extensive impact that earnings stripping can have on inverted entities. See Dept. of Treasury, “Report to The Congress on Earnings Stripping, Transfer Pricing and U.S. Income Tax Treaties” (Nov. 2007); Jim Seida and William Wempe, “Effective Tax Rate Changes and Earnings Stripping Following Corporate Inversion,” at 805, NAT’L TAX JOURNAL (Dec. 2004) (studying 12 corporate inversions and finding that earnings stripping was the primary mechanism to reduce tax liability). See also Steven Solomon, Corporate Inversions Aren’t the Half of It, THE NEW YORK TIMES (Feb. 9, 2016 (“the bulk of the benefits of an inversion may come not from the lower foreign tax rate but from substantially reducing taxes on the American subsidiary [through earnings stripping]”), available at http://www.nytimes.com/2016/02/10/business/dealbook/corporate-inversions-arent-the-half-of-it.html?smid=tw-share&_r=2.

43 2015-49 I.R.B. 775 at 33 (“The Treasury Department and the IRS expect to issue additional guidance to further limit (i) inversion transactions that are contrary to the purposes of section 7874 and (ii) the benefits of post-inversion tax avoidance transactions. In particular, as described in section 5 of Notice 2014-52, the Treasury Department and the IRS continue to consider guidance to address strategies that avoid U.S. tax on U.S. operations by shifting or “stripping” U.S.-source earnings to lower-tax jurisdictions, including through intercompany debt. Accordingly, the Treasury Department and the IRS reiterate the requests for comments made in Notice 2014-52.”)
considering moving their tax headquarters out of the United States. The Kelley Drye & Warren LLP announcement regarding the Inversion Notice described the effect as follows:

Treasury clearly has put a monkey wrench in plans no matter how much the companies involved may argue to the contrary. It is simply not possible to blindly stick with plans in light of Treasury’s announced intention to find key elements of these planned mergers as illegitimate tax dodges. In the end, it may be that the companies involved are still able to restructure plans and proceed with planned tax inversions perhaps preparing years of litigation with U.S. tax authorities, but the risks and uncertainties for pursuing tax inversions have clearly been raised and that will eventually impact business planning.  

In addition to having to execute a transaction imbued with significant uncertainties as to whether tax benefits will be able to be realized, taxpayers that choose not to comply with the Inversion Notices may be subject to I.R.C. section 6662 understatement penalties. Moreover, taxpayers likely would not be able to ultimately challenge the legitimacy of any regulations issued pursuant to the Inversion Notices until they file a return, and either sue for a refund or fail to comply with the

45 Treas. Reg. Sec. section 1.6662-3 (“If any portion of an underpayment, as defined in section 6664(a) and §1.6664-2, of any income tax imposed under subtitle A of the Internal Revenue Code that is required to be shown on a return is attributable to negligence or disregard of rules or regulations, there is added to the tax an amount equal to 20 percent of such portion.”).
Inversion Notice and defend a suit of deficiency by the Internal Revenue Service (“IRS”). Once in court, the taxpayer would then have to be successful in its claim that Treasury exceeded its regulatory authority in issuing the Inversion Notices.

Rather than openly defy the Inversion Notices, other taxpayers have found ways to circumvent I.R.C. section 7874 and/or the Inversion Notices altogether and have proceeded with their inversions despite the murky regulatory landscape. Burger King completed its planned inversion by acquiring Canadian company Tim Horton in December 2014, in part because the new foreign entity has far in excess of the 25 percent business activities in Canada necessary to prevent application of the inversion provisions under I.R.C. section 7874.46 Even more recently, in November 2015, days after issuance of the Second Inversion Notice, Pfizer announced a $152 billion inversion deal with Ireland-based Allergan, the maker of Botox.47 In January 2016, Johnson Controls announced plans to invert by merging with Ireland-based Tyco International Plc.48 In both the Pfizer and Johnson Controls deals, shareholders of the existing U.S. companies are expected to own just shy of the 60 percent

ownership threshold necessary to trigger the Inversion Notices and I.R.C. section 7874.49

The persistence of inversion deals, even in the face of the Inversion Notices, underscores the necessity of congressional involvement for any permanent solution, should one be desired.50 However, many potential deals are still getting sidelined and even those that move forward comply with the Inversion Notices.51 As it impatiently waits for Congress to respond, Treasury has announced it will continue to expand its regulatory reach as far as possible in order to cast as large of a shadow as it can on these transactions, even if it is ultimately not able to stop them entirely.52

III. The Muscle Behind the Threat: Treasury’s Broad Regulatory Powers

In order to be valid, all agency issued regulations, including regulations issued by Treasury, must be promulgated pursuant to a delegation of authority by Congress.53 I.R.C.

49 Andrew Sorkin, A Tidal Wave of Corporate Migrants Seeking (Tax) Shelter (Jan. 25, 2016) (“the Treasury Department implemented a rule that an American company could not complete an inversion if it owned more than 60 percent of the combined company; Johnson Controls will own 56 percent of the combined company.”), available at http://www.nytimes.com/2016/01/26/business/dealbook/a-tidal-wave-of-corporate-migrants-seeking-tax-shelter.html?_r=1.

50 Andrew Sorkin, A Tidal Wave of Corporate Migrants Seeking (Tax) Shelter, The New York Times (Jan. 25, 2016) (“By my count, based on a series of conversations with investment bankers, there are probably at least another dozen deals of meaningful size being negotiated in the pipeline. The question is what it will take for Congress to not only take notice, but to pass legislation to thwart this steady corporate migration.”).

51 For instance, by structuring to avoid triggering the thresholds for application of the inversion provisions.

52 2015-49 I.R.B. 775 at 33 (“The Treasury Department and the IRS expect to issue additional guidance to further limit (i) inversion transactions that are contrary to the purposes of section 7874 and (ii) the benefits of post-inversion tax avoidance transactions.”).

section 7805(a) authorizes Treasury to provide “all needful rules and regulations” necessary to enforce the Internal Revenue Code. Moreover, a great number of provisions in the Internal Revenue Code also contain specific grants of statutory authority for Treasury to issue corresponding regulations.\(^{54}\) Treasury regulations are generally presumed to carry the force of law if they implement the underlying statute in a reasonable manner.\(^{55}\) The Supreme Court has stated that this delegation of regulatory authority is necessary in order to ensure the rules are written by “masters of the subject,” who “are responsible for putting the rules into effect.”\(^{56}\)

Moreover, although Treasury regulations are now presumed to be prospective in application,\(^{57}\) under I.R.C. section 7805(b) Treasury can issue any regulation effective as early as the date of a notice of intention to issue regulations (without any special cause) or if the regulation is intended to “prevent abuse,” it may be retroactive to any date deemed necessary by Treasury.\(^{58}\) This gives Treasury latitude to issue binding regulations that are

\(^{54}\) See, e.g. I.R.C. §§ 301(e)(4) (Distributions of Property) (“The Secretary shall prescribe such regulations as may be necessary or appropriate to carry out the purposes of this subsection”); 385(a) (Treatment of certain interests in corporations as stock or indebtedness) (“The Secretary is authorized to prescribe such regulations as may be necessary or appropriate to determine whether an interest in a corporation is to be treated for purposes of this title as stock or indebtedness (or as in part stock and in part indebtedness”); 1092(c)(4)(H) (Straddles) (“The Secretary shall prescribe such regulations as may be necessary or appropriate to carry out the purposes of this paragraph . Such regulations may include modifications to the provisions of this paragraph which are appropriate to take account of changes in the practices of option exchanges or to prevent the use of options for tax avoidance purposes.”).

\(^{56}\) Id. at 477, citing in part, United States v. Moore, 95 U.S. 760, 763 (1878).

\(^{57}\) Prior to the passage of I.R.C. section 7805 in 1996, all Treasury regulations could apply to transactions executed prior to their enactment, subject to “abuse of discretion.”

\(^{58}\) Congress did not define “abuse” thus leaving open the question of whether Treasury is also able to unilaterally decide when “abuse” is occurring. See generally, Shannon Weeks McCormack, Tax Abuse According to Whom, 15 Fla. Tax Rev. 1 (2013).
retroactive in nature before they have undergone notice and comment. Under the Administrative Procedure Act ("APA"), nonbinding proposed regulations are supposed to be issued pursuant to notice and comment and, after proper consideration of public input, final prospective binding regulations are issued. Treasury's specific statutory grant of retroactive authority, however, supersedes the APA's general regulatory requirements.

Thus, Treasury's broad regulatory powers strengthen its power to wield a threat of law in two ways. First, because Congress has explicitly given Treasury broad general regulatory powers under I.R.C. section 7805(a), even when Congress has not enacted a specific delegation of authority to Treasury with respect to a tax statute, Treasury is often nevertheless able to issue legally binding regulations. For analytical purposes, the question then is not typically whether Treasury has authority to regulate a specific matter, but rather what the proper scope of the authority should be.

Most of Treasury's regulations derive their authority from the general delegation under I.R.C. section 7805. Moreover, even if a specific delegation exists with respect to a particular topic, that authority is merely in addition to, and not in lieu of, the general regulatory authority granted to Treasury under I.R.C. section 7805. With respect to the Inversion Notices, Congress has explicitly given Treasury broad regulatory authority under I.R.C. section 7874. Because Congress has explicitly handed

60 See, e.g., Morton v. Mancari, 417 U.S. 535, 550-51 (1974) (“Where there is no clear intention otherwise, a specific statute will not be controlled or nullified by a general one, regardless of the priority of enactment.”).

63 I.R.C. section 7874(g) (The Secretary shall provide such regulations as are necessary to carry out this section, including regulations providing for such
over significant rulemaking power to Treasury, the line between overreaching by Treasury and a legitimate delegation of authority by Congress is blurry at best. This makes it much more difficult for a taxpayer to determine ex ante whether they will be able to mount a successful legal claim that Treasury has overstepped its regulatory limits. If taxpayers are truly unclear about the legitimacy of their legal challenges, rather than engage in protracted and expensive litigation with the IRS, they may choose to simply comply with (or structure around) the dubious regulation.

Second, because I.R.C. section 7805(b) allows Treasury to backdate regulations retroactively to the date “on which any notice substantially describing the expected contents of any temporary, proposed, or final regulation is issued to the public,” Treasury is able to easily engage in retroactive rule making through the use of notices. Indeed, both of the Inversion Notices explicitly provide that any regulations issued pursuant to the notices will be made retroactive to the date of the respective notices.\(^64\) As a result, Treasury is able to strengthen its threat of law because although a notice itself may not carry with it the force of law, to the extent that it substantially describes regulations that are intended to be issued at some future date, the notice is imbued with a pseudo force of law. Taxpayers must in many ways treat a notice with increased deference because at some future date, if final regulations described in the notice are issued, the full legal force of those regulations may be retroactive to the notice date. Treasury’s ability to threaten a retroactively effective force of law compels taxpayers to comply with regulations described in a notice in the same way as they would a

---

adjustments to the application of this section as are necessary to prevent the avoidance of the purposes of this section, including the avoidance of such purposes through — (1) the use of related persons, pass-through or other noncorporate entities, or other intermediaries, or (2) transactions designed to have persons cease to be (or not become) members of expanded affiliated groups or related persons.”).

\(^64\) 2014-42 I.R.B. 712 at 40; 2015-49 I.R.B. 775 at 32.
duly issued final regulation, because ultimately the penalty, audit, and litigation risks may be similar.\textsuperscript{65}

IV. Confronting the Threat: Judicial Limitations to Challenging Treasury’s Abuse of Power

With respect to most administrative agencies, if an affected constituent is displeased with a proposed regulation, it has the right to bring a pre-enforcement action against the agency the day the regulation is promulgated.\textsuperscript{66} APA section 704 provides plaintiffs a cause of action to challenge “final agency action,” which includes issuing temporary as well as final regulations, and APA section 702 waives sovereign immunity for actions seeking relief “other than money damages” for any “person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency action within the meaning of a relevant statute.”\textsuperscript{67} The Supreme Court held in \textit{Abbott Labs. v. Gardner}\textsuperscript{68} that a plaintiff has standing prior to the enforcement of a regulation by an agency in instances where the plaintiff is the subject of the regulation and risks penalties if it fails to comply. Since \textit{Abbott}, courts have regularly allowed judicial review of pre-enforcement regulatory actions in a variety of circumstances.\textsuperscript{69}

However, because the specific statutory standing rules under I.R.C. section 7421 and the Declaratory Judgment Act

\footnotesize{\textsuperscript{65} See discussions in Part IV infra.}

\footnotesize{\textsuperscript{66} Kristin E. Hickman, A Problem of Remedy at 1162 (2008), citing James T. O’Reilly, ADMINISTRATIVE RULEMAKING § 13:1 (2d ed. 2007) (“Pre-enforcement injunction actions sometimes are begun the very day that an agency rule is promulgated, with a request that the implementation of the rule be enjoined and that the court stay the effective date of the rule pending outcome of the litigation.”); Richard J. Pierce, Jr. et al., ADMINISTRATIVE LAW AND PROCESS § 5.7.4. (4th ed. 2004) (“In many circumstances, however, a party displeased with a regulation would prefer to wait and to challenge all aspects of that regulation in a proceeding in which that regulation is applied.”).}

\footnotesize{\textsuperscript{67} Hickman, A Problem of Remedy, at 1162.}

\footnotesize{\textsuperscript{68} Abbott Labs. v. Gardner, 387 U.S. 136, 154 (1967).}

\footnotesize{\textsuperscript{69} Hickman, A Problem of Remedy, at 1163.}
applicable to tax cases supersede the APA, pre-enforcement judicial review of Treasury’s regulatory actions is extremely difficult and uncommon. Moreover, even if a taxpayer survives I.R.C. section 7421 and DJA challenges, there would remain significant hurdles in the Article III justiciability doctrines to overcome. As a result, most challenges to Treasury regulations occur in one of two postures. The first is in refund litigation, where a taxpayer has paid the applicable taxes and penalties owed pursuant to the challenged regulation and then sues for a refund. The second is when after reviewing the taxpayer’s filings the IRS assesses a deficiency against a taxpayer for failing to follow the challenged regulation, and the taxpayer challenges the deficiency.

A. Section 7421 and the Declaratory Judgment Act

I.R.C. section 7421 (also known as the “Anti-Injunction Act”) provides that, subject to limited exceptions, “no suit for the purpose of restraining the assessment or collection of any tax shall be maintained in any court by any person, whether or not such person is the person against whom such tax was assessed.” This rule has been interpreted broadly to encompass not only the “assessment or collection” of taxes, but also to any activities that have the potential to or are intended to lead to the assessment or

71 Hickman, A Problem of Remedy, at 1174 (“In other words, consistent with scholarly expectations, the limitations posed by I.R.C. § 7421, the DJA, and judicial interpretations thereof have created a climate that simply disfavors allowing courts to remedy legal wrongs in the tax context through pre-enforcement review. Thus, in this climate, even where courts might be inclined to interpret I.R.C. § 7421 and the DJA to allow pre-enforcement APA procedural challenges against Treasury regulations to proceed, they may nevertheless decline jurisdiction on other more general grounds.”).

72 I.R.C. section 7421 contains limited procedural and substantive exceptions. For example, judicial review is permitted if the IRS fails to send a notice of deficiency prior to collection or if a taxpayer is seeking a determination of whether he or she is an employee for employment tax purposes.
collection of taxes.\textsuperscript{73} It has also been held to apply with respect to constitutional claims.\textsuperscript{74} Likewise, the DJA provides that courts are prohibited from issuing declaratory judgments “with respect to Federal taxes,” with limited exceptions.\textsuperscript{75} Courts have routinely held that the DJA and I.R.C. section 7421 are coextensive.\textsuperscript{76}

Although the legislative history is sparse, in \textit{Enochs v. Williams Packing & Nav. Co.}, the Supreme Court announced that the “manifest purpose of [I.R.C.] section 7421 is to permit the United States to assess and collect taxes alleged to be due without judicial intervention, and to require that the legal right to the disputed sums be determined in a suit for refund” in order to ensure “the United States is assured of prompt collection of its lawful revenue.”\textsuperscript{77} It further held that only if it is “apparent that, under the most liberal view of the law and the facts, the United States cannot establish its claim,” and “the taxpayer would suffer irreparable injury if collection were effected” may a suit for an injunction be maintained.\textsuperscript{78} The Court further emphasized that “[t]o require more than good faith on the part of the Government would unduly interfere with a collateral objective of the [Anti-
Injunction Act] — protection of the collector from litigation pending a suit for refund."\textsuperscript{79}

Thus, even under this so-called "Williams Packing exception," courts are only permitted to consider a pre-enforcement review if both the requirements of no colorable claim and irreparable injury are satisfied.\textsuperscript{80} Importantly, under the second requirement, courts have consistently held that taxpayers’ claims of irreparable harm are undermined by the fact they can pay the tax and sue for refund.\textsuperscript{81} Accordingly, even if Treasury completely disregarded the express provisions of the Code and had little to no factual basis for its actions, under the second prong a taxpayer still would have a nearly impossible case for gaining pre-enforcement relief.\textsuperscript{82}

**B. Justiciability Limitations**

Even if a taxpayer survives I.R.C. section 7421 and DJA challenges, there would remain significant hurdles in the Article III justiciability doctrines to overcome. Because most pre-enforcement cases are blocked by I.R.C. section 7421 and the DJA, courts rarely deal with the more general issues of standing and ripeness as they relate to Treasury regulations: “Nevertheless, several judicial opinions that do tread such ground reinforce the unavailability of pre-enforcement judicial review for Treasury regulations by accepting what appears to be a more restrictive view of standing or ripeness doctrine in tax cases as opposed to other areas of administrative law.”\textsuperscript{83}

\textsuperscript{79} Id. at 7-8.

\textsuperscript{82} In Nat’l Fed. of Indep. Bus. v. Sebelius, the Supreme Court did find I.R.C. section 7421 did not prevent the constitutional challenge of the patient mandate in the Patient Protection and Affordable Care Act because the shared patient responsibility constitutes a penalty, and not a tax, for purposes of the statute. 132 S. Ct. 2566, 2583-4 (2012).

\textsuperscript{83} Hickman, A Problem of Remedy, at 1174 (“In other words, consistent with scholarly expectations, the limitations posed by I.R.C. [section] 7421, the DJA, and judicial interpretations thereof have created a climate that simply
Article III requires that a taxpayer satisfy the basic case or controversy standing requirements.\textsuperscript{84} If a taxpayer is merely subject to a notice and Treasury has not issued any actual regulations yet, then clearly ripeness and finality doctrines are problematic for the taxpayer.\textsuperscript{85} Moreover, at a minimum to have standing in compliance with Article III, the plaintiff must have suffered an injury in fact, there must be a causal relationship between the harm and the complained action, and it must be likely that the injury can be redressed by a favorable decision.\textsuperscript{86} With respect to the Inversion Notices, even if the final regulations are issued, Article III’s “injury in fact” requirements poses a significant hurdle for taxpayers wanting to bring a direct APA challenge without having to engage in a transaction to which the regulations would apply.\textsuperscript{87}

The obvious problem with respect to the Inversion Notices and any resulting regulations is that a corporation would actually disfavors allowing courts to remedy legal wrongs in the tax context through pre-enforcement review.

\textsuperscript{84} \textit{Lujan v. Defenders of Wildlife}, 504 U.S. 555, 560 (1992) (“One of those landmarks, setting apart the “Cases” and “Controversies” that are of the justiciable sort referred to in Article III —“serv[ing] to identify those disputes which are appropriately resolved through the judicial process,” — is the doctrine of standing. Though some of its elements express merely prudential considerations that are part of judicial self-government, the core component of standing is an essential and unchanging part of the case-or-controversy requirement of Article III.”) (citations omitted).

\textsuperscript{87} Patrick J. Smith, \textit{Standing Issues in Direct APA Challenges to Tax Regulations}, Tax Notes at 1037 (Nov. 23, 2015) (“The government will most likely rely on the injury-in-fact requirement in arguing that taxpayers bringing direct APA challenges to tax regulations in district court lack standing if they have not engaged in at least one transaction to which the challenged regulation would apply. The reasoning would be that the challenger has not suffered an injury in fact as a result of the issuance of the regulations. According to the \textit{[Lujan]} Court, an injury must be actual or imminent — not conjectural or hypothetical — to satisfy the injury-in-fact requirement for standing. The government will likely argue that any injury suffered by a taxpayer that has not engaged in a transaction to which the regulations would apply is only conjectural or hypothetical.”).
need to invert in order to truly test the provisions. Inversion is not an action that can be readily undone. Before the corporation spends the considerable time and resources necessary to execute such a transaction, they would want to have some certainty as to how the corporation would be taxed going forward. Indeed, tax considerations in many instances are a primary driver of the inversion structures. Thus in order for taxpayers to gain clarity on the legality of the regulations \textit{ex ante}, they will need to argue that they are in fact harmed by being forced to refrain from the transaction because of the potential threat of dubious regulations.\textsuperscript{88}

C. \textbf{Deference and Mayo's “End” of Tax Exceptionalism}

If a taxpayer is able to challenge Treasury regulations in court, what deference will they be afforded? In \textit{Mayo Foundation}, the Supreme Court found that \textit{Chevron} and \textit{Mead} provide the appropriate framework for analyzing Treasury's rulemaking authority and rejected tax exceptionalism.\textsuperscript{89} Historically, Treasury maintained a special administrative status and repeatedly stretched the bounds of its power to issue general and interpretive authority regulations and bypass requirements under the APA. Congress itself has expressly given Treasury the ability to use temporary and retroactive regulations. Notwithstanding the \textit{Mayo Foundation} decision, Treasury's recent responses to the proliferation of corporate tax inversions have again resurrected its claim for tax exceptionalism.

\textsuperscript{88} Patrick J. Smith, \textit{Standing Issues in Direct APA Challenges to Tax Regulations}, Tax Notes at 1037-1038 (Nov. 23, 2015) ("The taxpayer's counterargument would be that a party can be an object of regulations without having actually engaged in a transaction to which they would apply. The reasoning would be that the regulations have harmed the taxpayer by making it less desirable and less advantageous to engage in the type of transaction to which the regulations would apply and that, in the absence of the adverse tax consequences, the taxpayer clearly would have engaged in it. In other words, the taxpayer is harmed by the challenged regulations because it is refraining from that transaction.").

\textsuperscript{89} 131 S. Ct. 704 (2011).
As a general matter, agency rules are entitled to either strong deference under *Chevron v. Natural Resource Defense Council* if the agency’s actions satisfy both prongs of the two-step test set forth in *United States v. Mead Corp.*, or are otherwise entitled to the lesser sliding-scale deference of *Skidmore v. Swift & Co.* However, prior to *Mayo*, courts found that in many cases tax regulations should be treated differently, providing a basis for so-called tax exceptionalism. In particular, many argued that while *Chevron* deference was available for Treasury regulations issued pursuant to specific grants of congressional authority, the lesser deference of *National Muffler Dealers Ass’n, Inc. v. United States* applied when Treasury exercised its regulatory powers under general grants of authority.

---

90 467 U.S. 837 (1984). *Chevron* first asks whether “Congress had spoken to the precise question at issue” or whether Congress left an ambiguity. In the latter case, a court should uphold that agency’s interpretation so long as it is a “permissible construction” that is not “arbitrary, capricious or manifestly contrary to the statute”. *Id.* at 842-4.

91 533 U.S. 218 (2001). Under *Mead*, the court must first ask whether Congress “delegated authority to the agency . . . to make rules carrying the force of the law,” and then ask whether the regulation is “promulgated in the exercise of th[e] authority”. *Id.* at 226-7.

92 323 U.S. 134 (1944). Under *Skidmore*, the level of deference given to agency action should “depend upon the thoroughness evident in its consideration, the validity of its reasoning, its consistency with earlier and later pronouncements and all those factors which give it power to persuade, if lacking power to control.” *Id.* at 140. Note that there are many permutations to the implementation and contours of this standard in administrative law jurisprudence, but this is an articulation of the general rule.

93 440 U.S. 472, 477 (1979). (“In determining whether a particular regulation carries out the congressional mandate in a proper manner, we look to see whether the regulation harmonizes with the plain language of the statute, its origin and its purpose. A regulation may have particular force if it is a substantially contemporaneous construction of the statute by those presumed to have been aware of congressional intent. If the regulation dates from a later period the manner in which it evolved merits inquiry. Other relevant considerations are the length of time the regulation has been in effect, the reliance place on it, the consistency of the commissioner’s interpretation, and the degree of scrutiny Congress has devoted to the regulation during subsequent re-enactments of the statute.”).
such as that in I.R.C. section 7805(a), authorizing Treasury to issue “all needful rules and regulations.”

In Mayo, the Supreme Court definitively held that tax is not special and absent a “justification to do so” Treasury regulations should be analyzed under the same framework used by all other areas of administrative law. The Court stated that “[it is] not inclined to carve out an approach to administrative review good for tax law only. To the contrary, [it has] expressly ‘[r]ecogniz[ed] the importance of maintaining a uniform approach to judicial review of administrative action.’” It further held that all Treasury regulations that satisfy Mead are Chevron-eligible. Specifically, it rejected any distinction between specific and general grants of authority and made clear that even if Treasury exercises its regulatory powers under general grants of authority, such as that in section 7805(a), as long as they are issued pursuant to notice and comment, they should be eligible for Chevron deference.

A second potentially less Treasury-favorable implication of Mayo is that Treasury may no longer be able to claim, as it historically has done, that the vast majority of its tax regulations are simply exempt from APA requirements. Historically,

94 Rowan Cos. v. United States, 452 U.S. 247 (1981) and United States v. Vogel Fertilizer Co., 455 U.S. 16 (1982) (although Rowan and Vogel pre-dated Chevron and Mead, the latter two cases were not tax-specific).

96 Id. at 713.

97 Id. at 714 (“We believe Chevron and Mead, rather than National Muffler and Rowan, provide the appropriate framework for evaluating [tax regulations].”)

98 Id. at 713-14 (“We have held that Chevron deference is appropriate ‘when it appears that Congress has delegated authority to the agency generally to make rules carrying the force of law, and that the agency interpretation claiming deference was promulgated in the exercise of that authority. Our inquiry in that regard does not turn on whether congress’ delegation was general or specific... The Department issued the full-time employee rule only after notice-and-comment procedures, again a consideration identified in our precedents as a ‘significant’ sign that a rule merits Chevron deference.’”) (citations omitted).
Treasury has maintained that most of its rules promulgated under general grants of authority are not legislative rules subject to the notice and comment rulemaking requirements of APA sections 553(b) and (c).99 Rather, Treasury argues that these rules satisfy one of the interpretative rule, procedural rule, or good cause exceptions from those procedures.100 However, the court in Mayo, at least with respect to judicial review, eliminated the difference between Treasury’s regulations issued under grants of specific versus general grants of authority.101 Thus, to the extent that Mayo more broadly ended tax exceptionalism, Treasury may have even shakier ground to claim that its regulations are somehow special and therefore exempt from the general APA rules that other administrative agencies must comply with.102

100 Kristin E. Hickman, A Problem of Remedy: Responding to Treasury’s (Lack of) Compliance with Administrative Procedure Act Rulemaking Requirements, 76 GEO. WASH. L. REV. 1153, 1158 (2008) (“At a minimum, the tax community has always understood that Treasury regulations promulgated pursuant to specific grants of authority in substantive I.R.C. provisions are legislative in character. Yet, Treasury often fails to follow APA rulemaking requirements even when it issues regulations pursuant to such authority. On those infrequent occasions when Treasury makes an explicit claim to the good cause exception, Treasury rarely offers the sort of particularized explanation often demanded by the courts.”).

101 Even prior to Mayo, Kristin Hickman persuasively argued that, “[Treasury’s] position is generally implausible under modern conceptions of the distinction between legislative and interpretative rules, murky as that doctrine is.” Hickman, A Problem of Remedy: Responding to Treasury’s (Lack of) Compliance with Administrative Procedure Act Rulemaking Requirements, 76 GEO. WASH. L. REV. at 1158. See also Kristin E. Hickman, Coloring Outside the Lines: Examining Treasury’s (Lack of) Compliance with Administrative Procedure Act Rulemaking Requirements, 82 NOTRE DAME L. REV. 1727, 1740-59 (2007) (documenting methodology and findings of study of 232 regulatory projects for which Treasury published notices of proposed rulemaking, temporary regulations, or final regulations in the Federal Register between January 1, 2003, and December 31, 2005).

Even if it is true that Treasury can no longer claim broad exemption, compliance with APA notice and comment by itself does not guarantee that more taxpayer friendly regulations will ensue. This is particularly true with respect to issues about which Treasury feels strongly and with respect to issues affecting disparate taxpayers with no common lobbying efforts. In fact, in order to make sure it avails itself of *Chevron* eligibility, Treasury may more strategically engage in notice and comment procedures, as it did with the Inversion Notices, particularly when it believes it is acting on shaky legal grounds. Not only will Treasury have a strong argument that the *Mead* requirements are satisfied, as discussed above, increasing notice can actually extend Treasury’s ability to issue retroactive regulations.\textsuperscript{103}

\textbf{D. What is a Taxpayer Left to Do?}

Because most pre-enforcement judicial review actions would likely be barred under I.R.C. section 7421 and the DJA, any remaining cases would have a tough time overcoming Article III standing and ripeness limitations, and once in court Treasury would likely enjoy *Chevron* deference, what other options does a taxpayer have in the face of questionable Treasury regulations? A taxpayer is left with a few choices, none of them arguably as ideal as pre-enforcement review.

First, a taxpayer may sue for refund. However, this response is not an option if the taxpayer lacks the financial resources to pay the resulting tax or if the taxpayer does not want to suffer the economic burdens that would ensue if a court upholds Treasury’s actions. For example, in the case of the Inversion Notices, if a taxpayer engages in an inversion transaction, it must “overpay” its taxes by failing to claim any of the purported benefits from the inversion and then sue for a refund.

---

\textsuperscript{103} This phenomenon, although statutorily permissible under I.R.C. section 7805(b)(3), is in direct contravention of typical APA procedures that require final regulations to be issued prospectively following the required notice and comment period.\textsuperscript{103}
refund and hope those monies are recovered. Second, a taxpayer may act in contravention to Treasury’s rules and claim the benefits on its return and wait for a notice of deficiency from the IRS. However, this requires the taxpayer to subject itself to understatement penalties and closer scrutiny of its entire return.\footnote{104} Moreover, the taxpayer has to wait for the IRS to act before it is able to bring its case to court. Third, even if a taxpayer engages in a transaction not in compliance with Treasury’s guidance, it may choose to seek pre-litigation settlement with the IRS. While a taxpayer has the potential to gain more favorable terms in the settlement than it would in court, the outcome is largely out of the control of the taxpayer’s hands and the process is not able to create binding precedent on the IRS to the extent the underlying substantive issue is recurring.

As a result of the lack of any favorable choices, in many cases, the easiest option is for a taxpayer to merely comply with the dubious Treasury action, even if they believe it involves an unlawful exercise of Treasury’s powers. Otherwise the taxpayer will “put themselves through the effort of raising a challenge, placing themselves in a negative enforcement position or operating indefinitely in a state of uncertainty regarding tax noncompliance and the potential consequences.”\footnote{105}

V. Practical Implications of the Threat of Law

In this Article, I argue that when Treasury acts under the guise of authority, when it is unclear whether or not it actually possesses the legal authority to do so, it is able to effectively exert over taxpayers a threat of law. Whether or not this threat is desirable or legally defensible, it can nevertheless be an effective tool for Treasury because taxpayers often cave in or otherwise modify their behavior in response.

\footnote{104} Treas. Reg. Sec. § 1.6662-3.

\footnote{105} Kristin E. Hickman, A Problem of Remedy at 1182 (“Many taxpayers undoubtedly elect to comply with or rearrange their affairs to avoid regulations that they find questionable…”).
A. The Full Force of the Threat of Law

Even highly sophisticated taxpayers with ample available resources to fight Treasury are keenly aware of the inevitable uphill battle they must face. As discussed above, in the first instance, taxpayers face significant challenges to obtaining pre-enforcement review of even the most questionable Treasury actions under I.R.C. section 7421 and the DJA. This lack of a readily available *ex ante* judicial remedy then leaves taxpayers left to choose among the less ideal *ex post* options. In some instances they may continue with their planned transactions, if possible, and then challenge the government after the fact through either a suit for refund or challenge to a notice of deficiency. However, as discussed above, both of these options subject the taxpayer to any number of undesirable consequences, including exposure to significant financial uncertainty, steep litigation costs, and potential understatement penalties. As a result, many taxpayers simply choose the option of least resistance and greater certainty by merely giving in to Treasury’s threat of law, even if they strongly disagree with the legitimacy of Treasury’s power.

Treasury’s threat of power, legitimate or not, is buttressed by statutory advantages it enjoys and by the Supreme Court’s decision in *Mayo*. I.R.C. section 7805(b) explicitly gives Treasury the authority to issue regulations retroactive to the date any notice substantially describing the expected contents of any temporary, proposed, or final regulation is issued to the public. This bolsters the threat in several regards. First, even if a notice itself is not binding on taxpayers, it creates a threat of law that can nevertheless create the effect of the force of law because of the retroactivity. The final regulations once issued, will carry the force of law until successfully challenged by the taxpayer, and failure to comply with the regulations will subject taxpayers to the imposition of understatement penalties.\(^{106}\) As a result, a non-

\(^{106}\) Treas. Reg. Sec. section 1.6662-3 (“If any portion of an underpayment, as defined in section 6664(a) and §1.6664-2, of any income tax imposed under subtitle A of the Internal Revenue Code that is required to be shown on a return is attributable to negligence or disregard of rules or regulations, there is added to the tax an amount equal to 20 percent of such portion.”).
binding notice of intention to issue regulations can itself be immediately binding in a practical sense, because the contents therein will one day become binding retroactively once regulations are in fact issued.

If a taxpayer does choose to challenge Treasury’s actions in court, Mayo has guaranteed that Treasury’s actions will be eligible for the more deferential Chevron standard, as opposed to the more taxpayer-favorable National Muffler standard, regardless of whether Treasury is acting under a specific or general statutory grant of authority, particularly if it allows for a notice and comment period. Moreover, even if the regulation itself is struck down, the court can still respect Treasury’s substantive interpretation of the law as reasonable and the taxpayer may still lose on the merits.\textsuperscript{107} Under National Cable & Telecommunications Ass’n v. Brand X Internet Services, any reasonable Treasury interpretation of an ambiguous statute can override the prior judicial interpretation of the statute if Treasury’s interpretation passes Chevron.\textsuperscript{108} Combined these judicial doctrines create a significant hurdle for taxpayers challenging Treasury actions.

\textbf{B. Swift Responses to Taxpayer Abuse}

If left largely unchecked by the judicial system, should this broad threat of power by a regulatory agency otherwise be contained? In the face of aggressive taxpayer abuse, Treasury’s ability to act swiftly to curb taxpayer behavior may be desirable, particularly when Congress is unable or unwilling to do so.\textsuperscript{109} Attempting to stay one-step ahead of wily taxpayers is nearly an

\begin{footnotesize}
\begin{itemize}
\item \textsuperscript{108} 545 U.S. 967, 982 (2005).
\item \textsuperscript{109} Kimberly S. Blanchard, Extensive New Anti-Inversion Rules Issued, Tax Notes, at 89 (Oct. 6, 2014) (“[The Inversion Notice was] rushed out in response to growing political insistence that something had to be done to stop the so-called tsunami of inversions supposedly taking place in recent months. Given the political deadlock in Congress, the executive and legislative branches appeared to be largely in agreement that for the time being, it was up to the IRS to take action — so it did.”).
\end{itemize}
\end{footnotesize}
impossible task, and so creating uncertainty for taxpayers, either through broad anti-abuse doctrines or other measures may be the only effective way to deter abusive transactions.110

Taxpayers are already subject to challenge by the IRS on transactions that have already closed if the transactions lack economic substance and have no underlying business purpose other than the realization of tax benefits.111 If a transaction fails to satisfy these rules, the purported tax benefits of the transaction can be retroactively stripped if successfully challenged in court. While the economic substance doctrine may be an invaluable weapon in the IRS's arsenal against abusive transactions, it is unable to stop many of the complicated transactions devised by sophisticated taxpayers and their advisors ex ante. However, when combined with the threat of law, Treasury may have a much more effective combined weapon to fight perceived tax abuses. A notice for retroactive regulations may serve to broaden the already existing cloud under which taxpayers must operate.

C. A Solution for Congressional Deadlock?

The threat of law may also be a way to motivate an otherwise dormant or gridlocked Congress into timely passing, or at least considering, needed legislation. By changing the applicable default rules, unilateral action by an agency can potentially force Congress into action.112 If Congress disagrees

111 Under long-standing case law principles, recently codified in part by I.R.C. section 7701(o), this threat against improper taxpayer behavior may not in substance really expand Treasury's otherwise existing powers. I.R.C. § 7701(o) (a “transaction shall be treated as having economic substance only if (A) the transaction changes in a meaningful way (apart from Federal income tax effects) the taxpayer's economic position, and (B) the taxpayer has a substantial purpose (apart from Federal income tax effects) for entering into such transaction.”).

112 Stephen E. Shay, Mr. Secretary, Take the Tax Juice Out of Corporate Expatriations, Tax Notes, at 477 (July 28, 2014) (“The obvious advantage of taking regulatory action is the ability to act quickly. That is especially important because more and more companies are planning or seeking
with the new default law, then timely and responsive legislation can be implemented to overturn it. It is likely that to the extent highly organized and/or sophisticated groups of taxpayers are adversely affected, the incentive for congressional members to act will be even greater. These affected regulatees would bombard Congress with forceful lobbying efforts, putting significant pressure on them to strike down the offensive threat of law.

On the other hand, even if Congress agrees with the agency’s new regulatory action, it may still need to codify the changes, particularly if the regulations were enacted under a questionable delegation of authority. While the pressure may not be as great on Congress to pass new legislation if the threat of law sufficiently changes the default rules, there are still reasons why Congress may feel compelled to act. If the new change in law is truly desirable, Congress may want to insulate it from any future legal challenges and/or expand it to make it more effective.113 Even more compellingly, if, as is the case with the Inversion Notices, the proposed provisions are revenue raisers, Congress will be able to capitalize on having additional revenue offsets for its budget planning purposes if the regulations are enacted as law.114

transactions that take advantage of apparent statutory loopholes... The exercise of regulatory authority changes the default position. Instead of waiting for Congress to act and relying on the market to deal with the risk of losing the corporate tax base in the meantime (in hopes there would be an inadequate supply of foreign targets23 or the price or risk of acquiring foreign targets goes too high), adopting regulations first would reduce the risk to the U.S. corporate tax base while Congress considers how to address the problem in legislation as part of tax reform or otherwise.”).

114 Stephen E. Shay, Mr. Secretary, Take the Tax Juice Out of Corporate Expatriations, Tax Notes, at 477-8 (July 28, 2014) (“The Stop Corporate Inversions Act of 2014 is estimated by the Joint Committee on Taxation to raise $19.5 billion over 10 years. A regulatory change is not treated as raising revenue until revenue is received (that is, loss of revenue does not occur). It
D. Limitations on the Remedies for the Threat of Law

Despite the potential benefits a threat of law may yield, the question remains, if taxpayers are not engaged in abusive transactions and Treasury has merely overstepped its regulatory authority, what limitations should the threat of law face? Given the difficult time taxpayers have seeking pre-enforcement judicial review of their grievances, sentiments of unfairness and lack of due process are certainly warranted. Indeed, even in *Enochs*, where the Supreme Court openly accepted the limitations imposed by I.R.C. section 7421, it stated a presumption that Treasury would be acting in “good faith.”\(^{115}\) To the extent that this assumption is no longer warranted, it seems that permitting a continued expansive application of I.R.C. section 7421 and the DJA to inhibit pre-enforcement review is no longer warranted. Rather, taxpayers must have some available avenue to challenge *ex ante* regulations resulting from an abuse of power.

If pre-enforcement judicial review is not feasible, taxpayers may also get relief through another avenue, although it has only been done once before.\(^{116}\) A final administrative rule can be overturned through the Congressional Review Act (the “CRA”) as long as lawmakers in both houses of Congress are able to pass a “resolution of disapproval” and get the signature of the President (or have two-thirds majorities in both houses).\(^{117}\) This is not an adequate remedy for taxpayers subject to Treasury overreaching for several reasons. First, the CRA requires the same level of

\(^{115}\) 370 U.S. 1, 7-8 (“[Section 7421(a)] indicates that if Congress had desired to make the availability of the injunctive remedy against the collection of federal taxes not lawfully due depend on the adequacy of the legal remedy, it would have said so explicitly. Its failure to do so shows that such a suit may not be entertained merely because collection would cause an irreparable injury, such as the ruination of the taxpayer’s enterprise.”).

\(^{116}\) Congressional Review Act was following Bush election to overturn a regulation issued late in President Bill Clinton’s last term to require new ergonomic rules for office workers.

congressional support that it would require to simply pass tax legislation overruling the offending regulation. It also requires that the President reject Treasury’s use of regulatory power. In the case where the President supports Treasury’s use of power, particularly where Congress is unable or unwilling to act, regulations with the threat of law may end up standing absent contrary support from a super-majority of Congress.

Ultimately, absent an enhanced access to pre-enforcement judicial review or a diminished standard of review for examining Treasury’s exercises of a threat of law, current remedies for taxpayers affected by Treasury’s overreaching regulatory actions, such as those in the Inversion Notices, may be insufficient. While the need for Treasury to be able to respond swiftly to actual taxpayer abuses may be helpful, and at times necessary, exceeding the bounds of its regulatory authority cannot be the accepted solution.

VI. Conclusion

While it is clear that even a threat of law can have a chilling effect on taxpayers, ultimately it is not a permanent substitute for legislative action. Regulated entities appear to be more willing to actively defy a dubious exercise of regulatory authority, particularly when they sense an impotent Congress that is unable or unwilling to address the underlying issue.

Given the difficulties taxpayers face in challenging an improper threat of law by Treasury ex ante through traditional channels, such as the courts, it becomes extremely important that there are ways in which Treasury is restricted from acting in defiance of its statutory authority. Procedural and/or judicial safeguards must be put in place in order to ensure there are adequate checks and balances on perceived abuses of Treasury’s powers. One potential solution would be a more narrow application of I.R.C. section 7421 and the DJA. Moreover, to the extent that Congress more regularly and timely engages in substantive law making, administrative agencies will have fewer opportunities to engage in overreaching, quasi-legislative rulemaking.
