Welcome. This course equips you to analyze legal problems with the tools of microeconomic theory. Economic reasoning can shape how disputes are framed, how arguments are built, and how experts are examined. We will develop these tools carefully, from their mechanics to their applications. No prior background in economics is assumed or required to do well.

Learning Outcomes: By the end of the course, students will be able to comprehend, apply, and analyze the economic concepts developed over the semester. Students will be able to solve problems involving economics and its intersection with the law.
